MATTER ANTIMATTER FLUCTUATIONS

SEARCH, DISCOVERY AND ANALYSIS OF B_s FLAVOR OSCILLATIONS

NUNO LEONARDO

Complete work published as:

Analysis of B_s oscillations at CDF, MIT Thesis (2006)

Matter antimatter fluctuations, Monograph, LAP Lambert (2011)

Author © Nuno Teotónio Leonardo

Contents

Preface	i
Preamble	xi
1 Introduction	1
1.1 Synopsis and roadmap	2
1.2 History note	10
2 Theory foundations	1
2.1 Quantum mechanics of particle-antiparticle oscillations	1
2.1.1 Effective Hamiltonian	1
2.1.2 Time evolution	4
2.1.3 Neutral $B\bar{B}$ meson systems	5
2.2 Phenomenology of flavor oscillations	6
2.2.1 Quark masses and flavor changing interactions	8
2.2.2 CKM ansatz and the unitarity triangle	11
2.3 Standard model and beyond	16
2.3.1 Model constraining	16
2.3.2 Standard model relations	20
2.3.3 Parameterization of new physics effects	22
2.4 Résumé	24
3 Experimental apparatus	1
3.1 The Tevatron collider	1
3.2 The CDF II detector	6
3.2.1 Tracking and vertexing	8
3.2.2 Calorimetry	15
3.2.3 Muon chambers	16
3.2.4 Time of flight	18

3.3	Data acquisition and trigger systems	21
3.3.1	Data flow	22
3.3.2	Real-time event selection	24
3.4	Résumé	27
4	Data samples selection and composition	1
4.1	Trigger requirements	2
4.2	Event reconstruction	5
4.2.1	Track selection and preparation	5
4.2.2	Pre-selection and BStntuple	6
4.2.3	Selection optimization	8
4.2.4	Reconstruction of B decays	9
4.3	Samples composition	13
4.3.1	Sub-samples classification	13
4.3.2	Fully reconstructed B samples	13
4.3.3	Partially reconstructed B samples	18
4.4	The full dataset	35
4.5	Monte Carlo samples	39
4.6	Résumé	40
5	Measurement of B mesons lifetimes	1
5.1	Fitting technique	1
5.1.1	Maximum likelihood	1
5.1.2	Fit input variables	3
5.1.3	Likelihood factors	5
5.2	Proper time likelihood formalism for signal	6
5.2.1	Fully reconstructed and unbiased proper time	7
5.2.2	Fully reconstructed and biased proper time	7
5.2.3	Partially reconstructed and biased proper time	8
5.3	Describing trigger and reconstruction effects on proper time	9
5.3.1	The t -efficiency function	9
5.3.2	The κ -factor distribution	10
5.3.3	PDF normalization factor	12
5.4	Mass PDF	13
5.5	Proper decay time PDF	17
5.6	Fitting procedure and results	21
5.6.1	Fully reconstructed decays	22

5.6.2	Partially reconstructed decays	24
5.7	Calibration of proper time resolution	51
5.8	Résumé	57
6	Flavor tagging	1
6.1	Opposite side tagging	2
6.1.1	Soft lepton taggers	4
6.1.2	Jet charge taggers	9
6.1.3	Tagging performance	13
6.2	Same side tagging	15
6.2.1	Algorithm	17
6.2.2	Flavor asymmetry analysis	17
6.3	Combination of flavor taggers	19
6.3.1	Dilution factors	20
6.3.2	Independent taggers	22
6.4	Résumé	25
7	Measurement of B^0 oscillations	1
7.1	Fitting technique	1
7.2	Flavor tagging information	2
7.3	Likelihood formalism for flavor tagged samples	3
7.3.1	Non-oscillating components	4
7.3.2	Oscillating signal	4
7.3.3	Multiply-tagged candidates	6
7.4	Mixing and dilution calibration	8
7.5	Fitting procedure and results	11
7.6	Systematic uncertainties	15
7.7	Résumé	19
8	Search for B_s oscillations	1
8.1	Fitting technique	1
8.2	Flavor tagging and input calibration	2
8.3	Amplitude method	2
8.4	Likelihood description	4
8.5	Fits of the blinded data	6
8.6	Systematic uncertainties	7
8.7	Results	14

8.8 Résumé	17
9 Same-side kaon tagging algorithm development	1
9.1 Data and Monte Carlo samples	2
9.1.1 Monte Carlo generation	2
9.1.2 Selection and fitting model	3
9.2 Pre-selection of track candidates	3
9.3 Candidate algorithms	4
9.4 Parameterized dilution	5
9.5 Kaon identification	6
9.6 Tagging performance	7
9.7 Systematic uncertainties	9
9.8 Résumé	16
10 Observation of B_s oscillations	1
10.1 Emergence of the B_s oscillation signal	1
10.2 Extended dataset and first direct measurement	2
10.3 Further improvements and observation	5
10.4 Résumé	8
11 Mixing significance	1
11.1 Formalism	1
11.1.1 Likelihood approach	1
11.1.2 Fourier transform approach	4
11.2 Sensitivity estimation	10
11.3 Probability of random fluctuation	14
11.4 Résumé	16
12 Constraining the CKM parameters	1
12.1 Likelihood technique	1
12.2 Constraints	5
12.2.1 Neutral B meson mixing	5
12.2.2 Other constraints and input	6
12.3 Making use of the Δm_s amplitude information	9
12.4 Posterior probability distributions	10
12.5 Impact of the measurement	11
12.6 Résumé	19

13 Epilogue	1
Analytical likelihood evaluation	3
.1 Lifetime	3
.2 Mixing	5
.3 Log-likelihood expansion	7
Amplitude scanning and validation	11
.4 Fitting framework validation	11
.5 Shape of the amplitude scan profile	14
List of Figures	17
List of Tables	21
Bibliography	24
